

## General Rules for Water Solubility of Simple Ionic Compounds<sup>1</sup>

### Soluble Compounds

1. All nitrates and acetates.
2. All compounds with alkali-metal ( $\text{Li}^+$ ,  $\text{Na}^+$ ,  $\text{K}^+$ , etc.) and ammonium ( $\text{NH}_4^+$ ) cations.
3. The halides  $\text{Cl}^-$ ,  $\text{Br}^-$ , and  $\text{I}^-$ , *except* those of  $\text{Pb}^{2+}$ ,  $\text{Ag}^+$ ,  $\text{Hg}_2^{2+}$ , which are insoluble.
4. Sulfates, *except* those of  $\text{Sr}^{2+}$ ,  $\text{Ba}^{2+}$ ,  $\text{Pb}^{2+}$ , and  $\text{Hg}_2^{2+}$ , which are insoluble. ( $\text{CaSO}_4$  is slightly soluble.)

### Insoluble Compounds

1. Carbonates and phosphates, *except* those with alkali-metal and ammonium cations, which are soluble.
2. Hydroxides, *except* those with alkali-metal cations, which are soluble, and  $\text{Ca}(\text{OH})_2$ ,  $\text{Sr}(\text{OH})_2$ , and  $\text{Ba}(\text{OH})_2$ , which are sparingly soluble.
3. Sulfides, *except* those with alkali-metal, calcium, and ammonium cations, which are soluble.

---

<sup>1</sup>The following cations are considered in these general rules: group 1A (1), group 2A (2),  $\text{NH}_4^+$ ,  $\text{Ag}^+$ ,  $\text{Al}^{3+}$ ,  $\text{Cd}^{2+}$ ,  $\text{Co}^{2+}$ ,  $\text{Cr}^{3+}$ ,  $\text{Cu}^{2+}$ ,  $\text{Fe}^{2+}$ ,  $\text{Fe}^{3+}$ ,  $\text{Hg}_2^{2+}$ ,  $\text{Hg}^{2+}$ ,  $\text{Mn}^{2+}$ ,  $\text{Ni}^{2+}$ ,  $\text{Pb}^{2+}$ ,  $\text{Sn}^{2+}$ ,  $\text{Zn}^{2+}$ .
