

Bio 112 Handout for Physiology 2

This handout contains:

- Today's iClicker Questions
- Handouts for today's lecture

iClicker Question #22A - before lecture

Which of the following are true?

- A. Moving an ion from a low concentration to a high concentration requires energy input.
- B. Moving an ion from a high concentration to a low concentration is spontaneous.
- C. Ions cannot cross a membrane on their own.
- D. All of the above.
- E. None of the above.

iClicker Question #22B - after lecture

Consider the following cell:

If you let the pump pump Na⁺ out and K⁺ in and then open the Na⁺ channel, what will happen?

- (A) Na⁺ will go out of the cell, making V_m become +.
- (B) Na⁺ will go out of the cell, making V_m become -.
- (C) Na⁺ will go into the cell, making V_m become +.
- (D) Na⁺ will go into the cell, making V_m become -.
- (E) none of the above.

Beaming in your answers

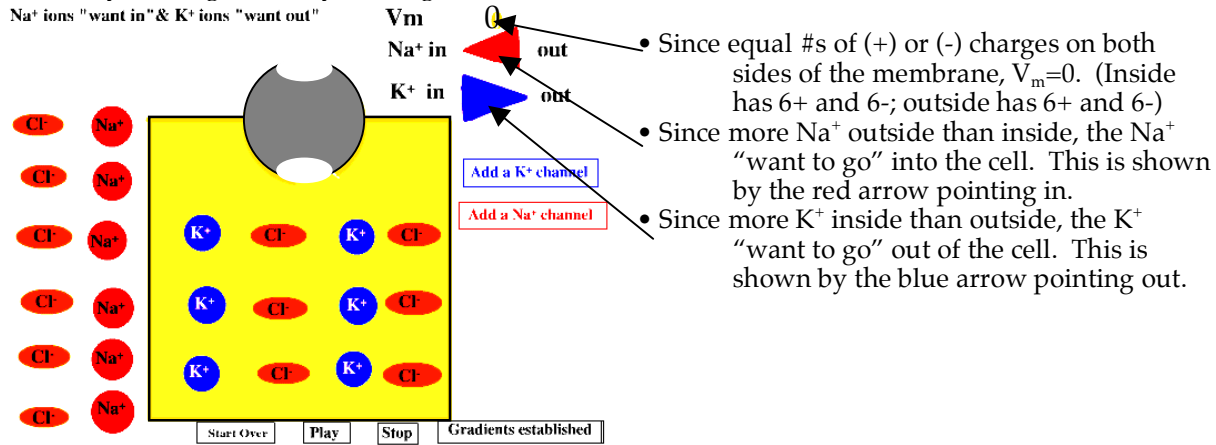

1. Figure out your answer and select the appropriate letter (A-E).
2. Turn on your iClicker by pressing the "ON/OFF" button; the blue "POWER" light should come on. If the red "LOW BATTERY" light comes on, you should replace your batteries soon.
3. Transmit your answer as follows:
 - a. Press the button corresponding to the answer you've selected (A thru E).
 - b. The "STATUS" light will flash green to indicate that your answer has been received. If the "STATUS" light flashed red, your answer was not received; you should re-send it until you get a green "STATUS" light.

Bio 112: Resting Potential

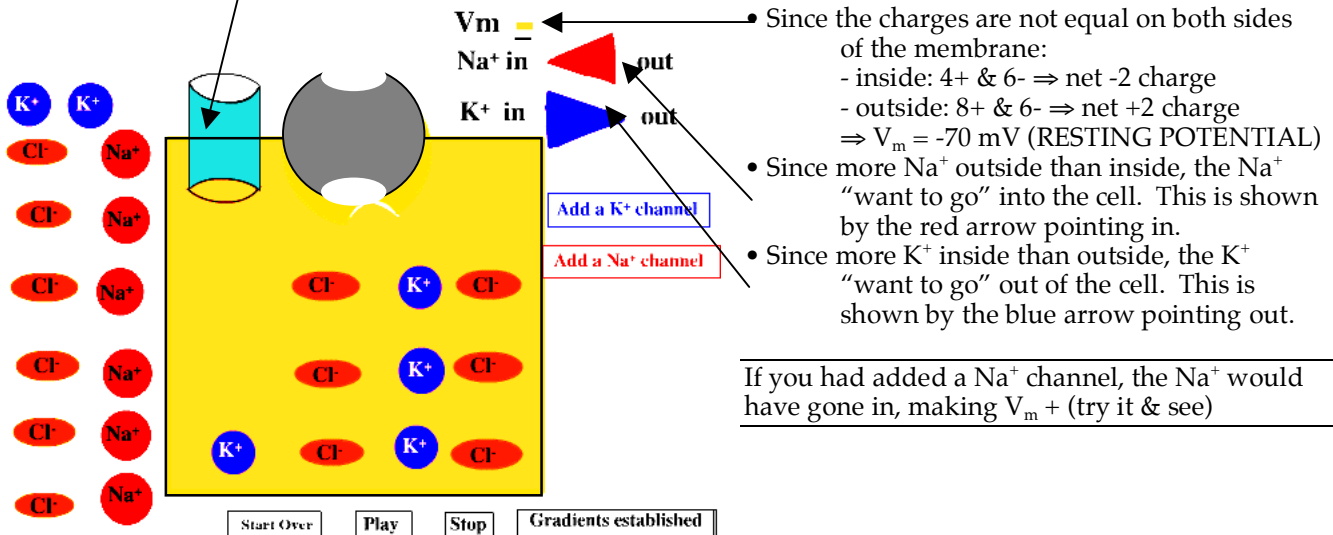

(1) Start: all concentrations equal on both sides of the membrane. Cells are never found in this situation; it is shown only for illustration purposes.

(2) Na⁺/K⁺ ATPase pump uses energy from ATP to pump Na⁺ out and K⁺ in. This gives this situation (you can get here by clicking the "Gradients Established" button):

(3) If you add a K⁺ channel (by clicking the blue button marked "Add a K⁺ channel"), some of the K⁺ will go out of the cell.

If you had added a Na⁺ channel, the Na⁺ would have gone in, making V_m + (try it & see)
